

**GUIDE FOR RING SIZES**

To obtain the best results, it is necessary to open the "Print Settings" before printing and make sure that the "adjust page size" option is deactivated.

To verify that the size of the graphic ring is correct, make sure that the bottom line measures 5 cm. If you have a ring that matches perfectly with the finger for which it was designed, you can put it on the circles and find which is the same size. The inner edge of the ring must coincide with the outer edge of the circle.

Choose a ring that suits you to know the measure and the thinner and more regular it is, if possible, the more accurate the measurement will be. Make sure that the ring that is chosen and purchased is for the same finger and the same hand since all the fingers are different.

It is recommended to choose a larger size in case of doubt between two sizes or if the ring that is purchased is wide.

6	7	8	9	10	11
